**BS**  
TRACK SHOES PROUDLY  
MADE OF BRITISH STEEL  
**TRACK**

**Bringing tracks to life**

[www.bs-track.com](http://www.bs-track.com)

## KEY FACTS

- Our modern production line produces triple, double and single track shoes to the highest possible quality.
- Track shoes are available with a pitch from 170 mm up to 317.5 mm for each track-based system.
- Production line capacity is 4000 kg per hour.
- Our high-quality production starts with the delivery of hot rolled special profiles from our exclusive supplier BRITISH STEEL.
- The well-experienced team works hand in hand and fulfills your requirements in highest quality.

## History

In 2019, together with our partner **BRITISH STEEL** and the founder and General Director of today's BS TRACK Makina, Mr. Bernhard Nestler, the idea was born to set up a modern manufacturing plant for the production of track shoes in Europe in order to be prepared for the growing demands of the market in terms of quality, flexibility and delivery times in the future.

Despite all the completely unknown and unexpected events at the time, such as the Corona pandemic and the subsequent problems in global logistics, we succeeded in setting up a highly modern production line that meets the highest quality standards.

From today's perspective, this decision was the right one and has even gained in importance.

We are proud of this.

## Location

Due to our excellent location in Cerkezköy/Turkey, we can guarantee you the best possible delivery conditions.

# Our Track Shoe Line

From the automatic loading system to 3D laser scan, our Track shoes are produced to the most demanding quality standards. Highest technology enables us to meet individual customer requirements. Do not hesitate to contact us. Track shoes from BS Track means made from professionals for professionals. Our first-class presses and heating furnaces make it possible to work with millimeter precision. Likewise, we are proud of the structure, as it allows us to make skilful use of every space and to work efficiently. In this way, we are able to produce 4000 kg per hour.
